

URBAN ENERGY ENTERPRISES

Used Oil

Urban Energy (UE²) has access to a used oil business unit providing customers with proven solutions for their used oil needs through a strategic business partnership with The McPherson Companies. The used oil unit, known as McClean, is McPherson's commitment to strict policies and standards that exceed regulatory requirements and offer customers safe solutions for the disposal of their used oil and filters. The McClean business is a significant component of McPherson's TPM - Total Petroleum Management offering.

UE² understands the liabilities customers have that are associated with used oil collection and disposal. The McClean business provides our customers with true peace of mind knowing that your used oil disposal is being handled by a company with strength, integrity and financial resources, which includes substantial insurance coverage, of McPherson.

In addition to the collection and disposal services of McClean, UE² also provides our industrial customers with a value priced supply of burner fuel. Our burner supply can be provided as either "black" or "blended" product. We can deliver burner fuel to our customers throughout the southeast via transport truck or railcar.

McClean offers our customers the following services:

- * Used oil collection
- * Used filter collection and disposal
- * Absorbent materials collection and disposal
- * Used Anti-freeze collection and disposal
- * Sludge removal
- * Burner fuel supply - black and blended
- * Vac-truck services
- * Oily water collection and disposal

Recycling

Through our strategic alliance, Urban Energy (UE²) is able to provide customers with a cost effective and environmentally friendly solution for our customer's lubrication program. ReNEW is an on-site or off-site filter and purification system designed to regenerate used product to better than new specifications. The ReNEW process creates a superior recycled product with a significant cost savings.

The recycling program begins with a thorough profile and qualification of your used oil stream. After determining whether your used oil is eligible for recycling, we will capture the used oil and prepare it for the recycling process. The recycling process includes filtering, dehydration and restoring the proper additives to new oil standards.

In addition to the recycling process, our team of professionals can meet with your engineers and maintenance personnel to establish lubricant cleanliness standards. We can assist your team with the monitoring of oil cleanliness and provide your team with recommendations at to the future life of your lubricants.

The ReNEW process provides the following benefits to our customers:

- * Improved lubricant life
- * Improved filter life
- * Lower cost lubricants
- * Improved equipment reliability
- * Lower maintenance costs
- * Environment friendly lubrication program

ReNEW is truly recycling!
